

Leland Industries Inc. introduces an industry first: A powder coating limited performance warranty.

Leland Industries has been successfully manufacturing and powder coating fasteners for metal cladding and industrial applications since 1998 and has perfected powder coating to protect the head and under the head where rust begins.

Now, when Leland Powder Coating is applied over a substrate of JS500, tests **PROVE** that fastener paints will **MEET OR EXCEED** the warranty period, as established by the panel manufacturer and/or paint manufacturers of WeatherX™, SpectraCote™, and Perspectra series paint systems.

Leland's powder coating performance limited warranty is dependent on usage of Lobular Surface Drive Bits produced for painted fasteners and made to specific tolerances as set forth by the manufacturers of same.

Leland's line of fasteners for metal cladding industry is available in more than 90 colors including clear powder for galvanized or Galvalume™ sheet.

For complete information on Leland's "Powder Coating Performance Limited Warranty" and our extensive product line of domestically manufactured fastener products, including platings, coatings, and wet painting, call 1-800-263-3393 to learn how Leland's fasteners can meet your expectations!
